

CoverSkin

Skin protection

oelheld[®]
innovative fluid technology

Properties

CoverSkin is a universally applicable barrier cream that protects the skin from direct contact with work substances. It is quickly absorbed into the skin forming an elastic, breathable and invisible protective film which doesn't rub off onto workpieces and tools. CoverSkin is silicone- and paraben-free and leaves no residue after absorption.

Application

Apply a small amount of foam (about the size of a walnut) to thoroughly washed and dried hands. Apply the foam to your hands and rub it between your fingers and nails.

Field of application:

CoverSkin provides protection against both water-soluble and neat work substances and liquids that are potentially hazardous to skin. It is versatile and ideal for work situations in which a wide range of substances are used or to prevent fingerprints being left on workpieces or tools, etc. As such, CoverSkin is particularly well suited for use in metalworking, plastics, precision and electrical engineering environments.

Advantages

- Universally applicable barrier cream that protects the skin
- Forming an elastic, breathable and invisible protective film
- Quickly absorbed into the skin
- Complies with the current provisions of the EU Cosmetics Regulation
- Silicone- and paraben-free
